

6140

Door Access Control System

Superior security for single door access applications.

The 6140 System combines S&G's models 6120 or 6123 Safe Locks with a modified version of our U.S. Government latching extension for doors. Typical applications include ATM rooms, telephone and computer equipment rooms, day gates for vaults or any controlled area where an auxiliary security door lock is beneficial.

The 6140 goes beyond traditional locks to bring the benefits of current micro-processing technology to your security application. You'll enjoy tremendous flexibility and greater management control:

- Up to 30 6-digit user PIN codes, depending on the model used.
- May be set up so that two distinct codes must be entered to open the door.
- Unlocks your door in one easy step – just enter the code and you're in.
- Automatically relocks when you shut the door.
- Easily change codes at any time with a few touches of the keypad.

6140 keypad surface mounts easily.

- Requires no turning of a dial to unlock the lock.
- Offers secure and reliable motor-driven lock bolt operation.
- Protects from being opened or manipulated with repeated, random code entry.
- Flexible integration capability — works with any security system.
- Release lever meets ADA requirements.

**Don't settle for less protection when
the 6140 System gives you the security
and control you need.**

6140

Door Access Control System

The secure, smart way to control local door access.

Easy to install. Quick and easy surface mounted installation of lock, strike and keypad allows for offsetting the keypad from traditional lock positioning for increased security.

Over 8,000 openings between battery changes. Two standard 9-volt alkaline batteries are housed in the keypad (S&G recommends Duracell®). When batteries get low, the lock's audio signal changes pitch to let you know. Your access codes remain programmed while you change batteries.

Interlocking strike. The 6140 System features an interlocking strike to prevent spreading of the door and frame — the same feature required for high security applications by the U.S. Government. Available for either inswing or outswing door applications.

A choice of finishes. Select any of the available electronic combination lock keypad finishes to complement existing door hardware. Choose matte black, satin or buff chrome and brass, plus 14- and 24-karat gold.

Delay opening for up to 99 minutes. No robber can afford to wait for a safe to be opened. Program an opening delay of up to 99 minutes. Employees must enter their access

Standard Release Knob.

Release Lever meets ADA requirements.

code, wait the delay period and re-enter their code within the opening window. A time delay override mode is available when immediate access is required by authorized personnel. (Available only on the model equipped with a 6123 lock.)

Ordering Information:

(Note: purchase keypads as a separate item.)

6123 lock:

Model 6140-003, inswing door application, #1 and #3 strikes.

Model 6140-004, outswing door application, #2 strikes.

6120 lock:

Model 6140-014, ADA lever, inswing, #1 and #3 strikes.

Model 6140-015, ADA lever, outswing, #2 strikes.

Additional security options:

- Spy-proof cover for keypad.
- Time delay status indicator for local or remote display.
- Bolt position indicator for monitoring of lock open/close status.
- Keypad extension cables.
- Remote enable/disable of lock access.
- Connect to an S&G electronic safe lock for enhanced security procedures.

Protect your assets with the 6140 electronic safe lock.
